Gardening is Glamorous

Back of every garden are hard work, aching muscles and muddy hands, but that is just the beginning. Gardening can open wide horizons to you—whether it be the saving of the redwoods or the planting of memorial highways or the raising of temperamental orchids. It can bring you much personal satisfaction in a job well done, besides better health and vitality and a sense of well being.

Our friend Webster says glamorous means fascinating, and on that basis we claim Gardening is Glamorous.

If you already have a lawn but want to improve it, sow 2 or 3 lbs. per 1000 sq. ft., depending on the present stand of grass.

Scotts Turfbuilder

Supplies all the needed elements in correct proportions for feeding grass and trees. Just before sowing seed apply Scotts Turfbuilder. This special grass food does not harm seed so it is not necessary to delay seeding. In constructing a new lawn, distribute 20 lbs. of Turfbuilder per 1000 sq. ft. and rake it into the top 2 or 3 inches of soil. Use just half this amount, 10 lbs. per 1000 sq. ft., when feeding an established lawn. Care should be used to make application only when the grass is dry. An abundant supply of the right type of nourishment not only encourages old grass to spread out and take a new lease on life but it also insures healthier and more vigorous growth of new grass.

GRUBS OF JAPANESE BEETLE

Damaged turf appears to be suffering from lack of water, turns brown in irregular patches. The grass is severed at roots and can be peeled off. Use Scotts Pest Control to kill these grubs.

CHINCH BUGS under glass, magnified seven times. Chinch bugs attack grass by piercing their tiny beaks into the grass stems to suck out juices. The grass wilts, then turns brown. Chinch bugs are active in full sun only. Unless their activities are checked, they will eventually destroy large patches of turf. They are especially active in hot, dry weather from early June until frost. Use Scotts Pest Control to kill these insects.

Selected Grasses and Field Seeds

Prices on separate grasses and field seeds are subject to market fluctuations and therefore are subject to change without notice.

Creeping Red Fescue. A permanent lawn grass that is particularly adapted to the shade. It spreads from the roots, making a dense turf which tends to crowd out weeds. Because of its deep roots, it is capable of standing dry weather. Grows well in sunny areas also. Lb. \$1.00; 10 lbs. \$9.50; 25 lbs. \$22.50.

Kentucky Blue Grass. Used mostly as a lawn grass. A permanent type of grass that produces dense, tough sod of a deep green color. It is slow in becoming established. Lb. \$1.10; 10 lbs. \$10.00; 25 lbs. \$23.75.

Fancy Red Top. A nurse grass that lives about three years on turf kept cut. It gives a fine texture the first year of growth and then becomes quite coarse during the second and third years. It makes quick growth, and nurses the permanent grasses until they become established. Lb. \$1.10; 10 lbs. \$10.00; 25 lbs. \$23.75.

Timothy. A tall-growing meadow grass used mostly for hay and pasture. Grows quickly. Lb. 45 cts.; 10 lbs. \$4.00; 25 lbs. \$8.75.

Colonial Bent. This permanent grass, very fine in texture, is similar to that used on putting greens. Spreads rapidly by creeping underground roots. Requires close cutting and plenty of moisture. Lb. \$2.00; 10 lbs. \$18.00; 25 lbs. \$40.00.

Domestic Rye Grass. Also known as Common Rye Grass. A quick grower often used in lawn grass seed mixtures as a nurse grass to prevent the soil from washing. Lb. 30 cts.; 10 lbs. \$2.75; 25 lbs. \$6.25.

Orchard Grass. A field grass used in pastures and meadows. Lb. 50 cts.; 10 lbs. \$4.50; 25 lbs. \$10.00.

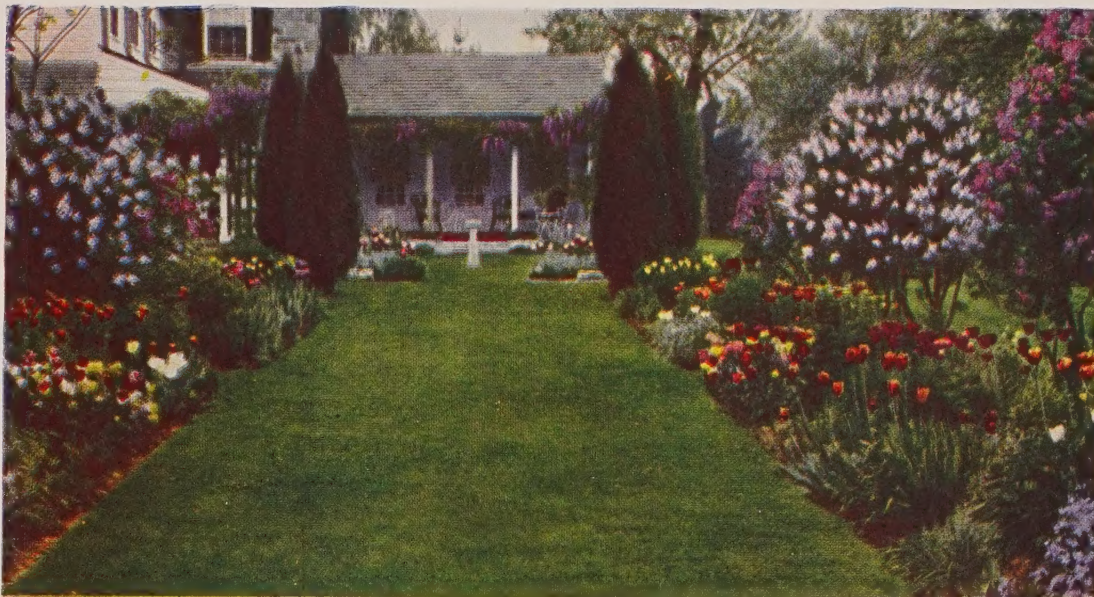

Perennial Rye Grass. A short-lived perennial lasting three to four years. Used as a nurse grass in lawn seed mixtures and also in meadow mixtures for hay and pasture. Good for a temporary lawn. Lb. 45 cts.; 10 lbs. \$4.25; 25 lbs. \$10.00.

New Zealand Chewing's Fescue. A permanent grass particularly adapted to the shade. The blades are very fine and wiry and are gray-green in color. Its deep roots and tough texture makes it a very hardy and durable grass. It will also grow in sunny areas. Lb. \$1.00; 10 lbs. \$9.50; 25 lbs. \$22.50.

Domestic Red Clover. Adds to the value of any meadow or pasture crop. Since it takes nitrogen from the air and puts it into the soil, it is a real soil improver. Lb. \$1.10; 10 lbs. \$10.00.

Annual Flower Seeds for Your Garden

Summer and autumn gardens would be dull indeed were it not for the wide variety of annual flowers which we can all enjoy with little effort. Our gardens are becoming more important in our every-day lives as a place where we can spend leisure hours for relaxation and we are naturally anxious to make them gay and bright.

Most of the annuals are easy to grow. For early bloom, seed can be started in a hotbed or coldframe. However, many amateurs find it easy to sow seed directly in the open ground as soon as all danger of frost has passed. Since most annuals transplant easily, it is best to prepare a small area and use it as a seed-bed. As the plants develop in size, they can be set out in beds and borders. If you are planning a cutting garden, you will find it easiest to grow annuals in straight rows. This simple arrangement provides for easy and effective maintenance.

Annuals can be used to brighten and lend interest to your perennial and shrub plantings. They can be used in formal beds or in broad informal borders. It is always fun to experiment with plantings in separate colors. By choosing distinctive varieties you can often achieve unusual effects.

In the pages that follow we have selected the outstanding annuals which are most popular at the present time. However, there are some gardeners who may not find their special favorites listed here. Space does not permit the listing of every variety which we have in stock. Tell us your needs and we will be glad to supply them.

Perennial and Biennial Flower Seeds

Many hardy perennials and biennials (plants which require two years to produce bloom, after which they set seed and die) are easily grown from seed. An important thing to remember is that seed should be started as early as possible in order to develop good-sized plants which will winter over easily. Seedlings of most perennials can be carried over winter with the protection of a light mulch. Most biennials, however, require covering or wintering in a coldframe, especially in exposed areas. Raising your own plants from seed is an easy and inexpensive way to develop a perennial border.

Flowering Bulbs . . . for Summer and Fall Bloom

Gladiolus for Exhibition

Plant the bulbs when the soil is warm in the spring. In this section that may be as early as April 15, and they may be set out as late as July 1. The best place is where they will have full sun. Bulbs should be clean when planted, and should be disinfected regardless of where obtained. The easiest and safest dip to use is Lysol. Dissolve 4 tablespoonfuls Lysol to 3 gallons water. Soak bulbs three to six hours in this solution. Plant same day as treated, while wet

if possible, 4 to 5 inches deep and at least 6 inches apart. From the time the plants are 6 inches high they should be sprayed for thrips at least once a week, because thrips may blow in from some distance and infest them even though the bulbs were clean when planted. To control thrips we recommend the use of a 25% DDT spray.

Peace

*the finest
Rose in America*

PEACE (Mme. A. Meilland). Plant Pat. 591.

 This glorious Rose is almost unbelievable in its beauty, size and lasting qualities. The buds are golden yellow enlivened by a flush of vivid pink at the petal edges. These buds open slowly, giving long-lasting blooms that show delicate tints of yellow, pale gold, cream and ivory blending on each petal to a lightly ruffled edge of pink.

The colors vary, and the change of tints is an enchanting thing to watch, as it differs from day to day and from flower to flower but is always beautiful and always in harmony, like the different, shimmering colors of a rainbow. Though the very double bloom is huge, it is constantly fresh looking, and its coloring always gives an effect of delicate loveliness even in the fully open flower, which actually is just as beautiful as the half-open bud and even more exciting!

The final miracle of Peace is that the plant is as remarkable as the blooms, with long, straight, magnificently strong stems and handsome, shining dark green foliage. The blooms come in glorious succession and hold their form and freshness remarkably. \$2.00 each; 3 for \$5.
